

Drive Fail Message

Applies to: VDC/VDM, Vi-Series DVR's

Drive Fail message on screen.

- ♦ Check power LED on drive(s) are on, if the power LED is off it would indicate the drive may be unlocked. This would show as a critical alert.
Turn DVR's power off, then lock the drive tray.
Turn power back on, the power LED should illuminate, then critical alert should now be cleared.
- ♦ If you have a dual or triple drive DVR, if one of the drive trays does not have a drive fitted, this would also show as a critical alert.
- ♦ Access the DVR menu and go to Alarm sub-menu, you can disable the drive fail alert for this drive.
We recommend this is only done if there is no drive in the tray.
