

What ports do Videoswitch DVRs use?

Applies to: VDC, VDM, Vi-series, Vi-M series DVRs

♦Videoswitch DVRs can be set to use any ports. Port numbers, together with IP addresses are set in the “Network” menu. You should however avoid port numbers for data and command that have predefined usage, in notably 80 and 8080. If you keep to ports in the 9000 - 9999 range you should have no problems.

♦VDC, VDM, Vi-series default port settings:

Command and data:	9221
-------------------	------

♦M-series default port settings:

Command:	9112
----------	------

Data:	9113
-------	------

Web browsing:	80
---------------	----

FTP Incident Upload	21
---------------------	----

♦When setting up a router, the port settings are set in the DVR must set in the router network address translation (NAT) table.
