

What roughly is the image size for CIF, 2CIF and 4CIF (D1)

Applies to: VDM, VDM, Vi-Series M-series

Vi-Series DVRs

The average image size depends on the quality setting and how complex the image is. Typical sizes are:

2CIF	15 - 40Kbytes
------	---------------

M-series DVRs

The average image size depends on the quality setting, how complex the image is and how much movement there is. Typical sizes are:

CIF	3 to 6 Kbytes
2CIF	6 to 12 Kbytes
4CIF (D1)	12 to 24 Kbytes
