

## Do any of your DVR's support wide screen?

Applies to: VDC, VDM, Vi-series, M-series

The above DVR`s do not utilise the full width of a wide screen monitor without additional equipment.

However the M-series has a VGA output that can drive a wide screen TV or monitors as long as the monitor is configured to accept 4:3 aspect ratio.

If you use a Videoswitch Vi-P14A quad screen processor, you can make full use of a wide-screen monitor on a Vi-M3, Vi-M4 or Vi-405 DVR by programming it to display multiple images on the wide-screen format (select 16:9 format) as shown below:
